

# 2024 WHEAT

## \*NEW\* 2405 "LEADER"

- Early maturity—Beards
- Medium plant height
- Impressive FAT HEAD
- Excellent BYD tolerance
- High management for best results
- Head scab resistance
- Above average test weight
- Suited for all soil types
- Excellent yield results in 2023 & 2024

## \*NEW\* 2408 "LEADER"

- Medium to late maturity—Beards
- Yield leader (Replaces 1907)
- Medium plant height
- Excellent standability and resistance to stripe rust
- Excellent head scab tolerance
- Above average test weight
- Wide plant type with impressive look
- Excellent drought tolerance
- All soil types

## 2205

- Medium late maturity—Beards
- Medium plant height
- Very high stable yield potential
- Head scab resistance
- Great disease package allows for minimal fungicide application
- Very healthy variety
- Broadly adapted – All soil types
- Handles droughty environments very well
- Mennel Milling Approved variety

## 1908

- Medium early maturity
- Elite yields
- Medium tall plant height
- Excellent straw producer
- Very heavy test weight
- Head scab resistance
- Excellent disease package
- Suited for average to tougher soils

Plant Traits & Disease Resistance	*NEW* 2405	*NEW* 2408	2205	1908

### PACKAGING

50 lb paper bags  
Mini-Bulk / Boxes (50 units = 2500 lbs)  
True Bulk (delivery minimum 100 units)

### RETURN POLICY

- Customers may return wheat until November 1, 2024
- No bags that have holes, tears, missing tags or have been opened may be returned
- No opened or partial mini bulk or box returns
- No return on true bulk

*Complete treatment protection on every unit of seed wheat*

## New Custom Wheat Treatment Blend

McKillip Seeds wheat varieties are treated with carefully selected systemic and contact fungicides and insecticide. Our treatments provide protection against a broad spectrum of seed and soil-borne diseases, such as rhizoctonia, seedling blight, loose smut, early season septoria, early suppression of wheat leaf rust and multiple modes of action against fusarium scab and pythium damping off.

Protecting wheat seedlings and getting them off to a healthy start is paramount to a high yielding wheat crop. Additionally, our high-quality wheat seed treatment protects the crop from yield robbing and disease transmitting insects such as Russian Wheat Aphids, English Grain Aphids, Bird Cherry Aphid, and suppression of wireworms, white grubs and Hessian fly.
